

Introduction to Density Functional Theory

I Static Density Functional Theory

1. Hohenberg-Kohn Theorem 2
2. Functionals and Functional Derivatives 5
3. Kohn-Sham Equations 8
4. Local Density Approximation (LDA) 11
 - 4.1. The homogeneous electron gas
 - 4.2. Quality of the LDA
 - 4.3. Coupling constant integration
5. Gradient Expansion and Generalized Gradient Approximations (GGA and GGA) 18
6. Spin-Density-Functional Theory 22
 - 6.1. Hohenberg-Kohn theorem
 - 6.2. Kohn-Sham system
 - 6.3. Collinear magnetism
 - 6.4. Local spin density approximation (LSDA)

II Time-Dependent Density Functional Theory

7. Runge-Gross Theorem 28
8. Time-Dependent Kohn-Sham Equations 30
9. Adiabatic Approximations 32
10. Linear Response 32
11. Calculation of Electronic Excitations 36
 - 11.1. Time evolution scheme
 - 11.2. Casida's equation
 - 11.3. Single pole approximation
